

PRODUCT INFORMATION SHEET: SLP – DAMP – 3100 | 3101

Packaging:	
SLP – DAMP – 3100 3101	

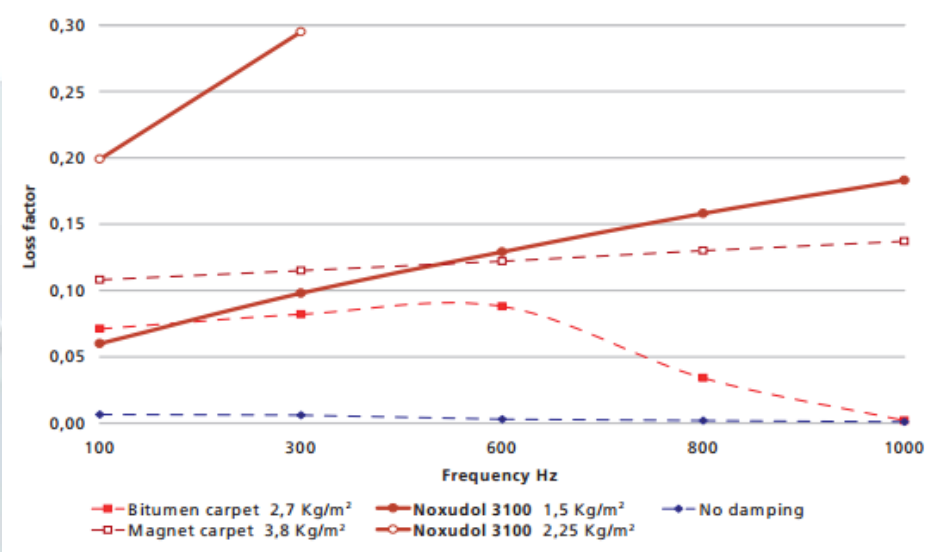

Description:

SLP- DAMP 3100 | 3101 is a high quality single sound deadening compound with high damping effects, low weight and designed for use at lightweight structures such as Aluminium, GRP and Carbon Fiber.

Two other welcome benefits are the high resistance to abrasion and the fact that the compound only absorbs a small amount of water. This means that it can be used to advantage in demanding conditions where there is a need to combine sound damping with protection against condensation and abrasion.

Solvent-free and coatable:

SLP –DAMP 3100 | 3101 is water based and also contains rust-prevention additives that deliver a corrosion-inhibiting effect. One spraying can achieve 2 mm dry film thickness. When the compound has completely dried it can be coated with most paints. **SLP – DAMP 3101 is IMO approved while 3100 does not have IMO approval certificate.**
