

Esthec Terrace:

We call Esthec *barefoot sophistication* since it includes all the charming properties of wood, yet without the inevitable cracking, splintering, warping or weathering.

Esthec provides excellent slip resistance, even when wet, is virtually indestructible (high heels proof) and requires minimal maintenance.

There is no “expiry date” for Esthec products. It will still look good as new after many years of use.

Esthec Terrace is a visionary and sophisticates terrace system which embellishes and enhances a multitude of outdoor zones with its unrivaled functional properties and haptics.

Esthec offers the owner and architect technical and aesthetic advantages and supports the trend to limit inadequate use of scarce natural resources.

Green Building:

Sustainability is at the top of everyone’s radar. Hence we highlight the environmental aspects of Esthec to contribute to sustainable solutions for the future. Esthec includes recycled material in production, reuses its own waste and the material is over 90% recyclable.

No wood is used in the manufacture of Esthec and our products are sourced locally, dramatically decreased our footprint.

Freedom of Color:

Print colours can vary from real colours. No rights can therefore be derived from the contents of this publication.

Esthec Terrace highlighted:

- ✓ *Composite material (no PVC)*
- ✓ *Low maintenance required*
- ✓ *Extremely durable (long life)*
- ✓ *Ecological product (recyclable) and ecological production (25% recycled materials; natural resins)*
